Student Officers

- Chair: Xiaoju Yu (Daisy)
- Vice chair: Kokou Gbele
- Treasurer: Min Liang
- Secretary: Xiong Wang

Details of the chapter and upcoming activities can be found at our chapter website at:
http://www.ece.arizona.edu/~mtt
Meeting Summary

February 16, 2012

Topic: Brief introduction of IEEE, MTT-S and Tucson MTT Student Branch Chapter
Sponsored by: IEEE MTT Tucson Student Branch Chapter

Speaker: Xiaoju Yu (Daisy)

It introduced some information of the IEEE (Institute of Electrical and Electronics Engineers), MTT society and student membership of IEEE and MTT. It also introduces the newly elected officers for the student branch chapter and potential activities this year.

April 30, 2012

Distinguished Microwave Lecturer Section
Sponsored by: Tucson MTT Student Branch Chapter and IEEE Tucson Section

Speaker - Natalia K. Nikolova (IEEE Fellow)
Title – “Microwave Near-Field Imaging Of Human Tissue: Hopes, Challenges, Outlook”

Abstract:
More than 40 years ago Larsen and Jacobi experimented with microwaves in the imaging of canine kidney. Their pioneering work triggered high hopes for a new diagnostic modality in medicine but also identified serious challenges. Research effort in this area continues unabated, focused especially on early-stage breast-cancer detection. The need for alternative cancer diagnostic tools is urgent and perceived worldwide as a high priority for research and development. Yet the very few clinical trials of experimental microwave imaging systems have not satisfied the requirements of today’s medical diagnostics. This talk briefly reviews past and recent developments in near-field microwave methods for tissue imaging. In the context of these developments, the major challenges are discussed –challenges which have so far prevented microwave imaging from becoming a clinically viable modality. Promising new directions of research are described that have the potential to bring about a breakthrough. These include advances in hardware design and characterization (sensor arrays, custom and laboratory measurement instrumentation), methodologies for tissue-parameter characterization, and the development of data-processing and reconstruction algorithms. Many of these new developments draw upon recent successes of microwave and millimetre-wave imaging systems used for concealed-weapon detection, through-the-wall imaging and underground surveillance. Thus it is shown how the ever expanding field of microwave imaging is converging to address some of society’s most urgent needs.
Biography
Natalia K. Nikolova received the Dipl. Eng. (Radioelectronics) degree from the Technical University of Varna, Bulgaria, in 1989, and the Ph.D. degree from the University of Electro-Communications, Tokyo, Japan, in 1997. From 1998 to 1999, she held a Postdoctoral Fellowship of the Natural Sciences and Engineering Research Council of Canada (NSERC), during which time she was initially with the Microwave and Electromagnetics Laboratory, Dalhousie University, Halifax, Canada, and, later, for a year, with the Simulation Optimization Systems Research Laboratory, McMaster University, Canada. In 1999, she joined the Department of Electrical and Computer Engineering, McMaster University, where she is currently a Professor. Her research interests include theoretical and computational electromagnetism with applications in inverse scattering, microwave imaging and computer-aided design. Prof. Nikolova has published more than 200 refereed manuscripts. She has authored 4 book chapters and has delivered many invited lectures on the computer-aided microwave analysis and design as well as on microwave near-field imaging. Prof. Nikolova holds a Canada Research Chair in High-frequency Electromagnetics. She is a Fellow of the IEEE.

June 22, 2012

International Microwave Symposium 2012, Chapter Chairs’ Meeting and Workshop at Montreal, Canada (attended by chapter officer Xiaoju Yu)

November 28, 2012

Topic: MTT Fall 2012 social event showcase
Sponsored by: Tucson MTT Student Branch Chapter

MTT Fall 2012 social event showcase with effective participation of UofA IEEE robotics club, Raytheon Missile Systems, UofA Millimeter Wave Circuits and Antennas Laboratory, and MTT student branch chapter.
